Date : 18 November 2021

Queries implemented for creating database and table in pgAdmin(postgree) :

1. Create a database for "online_vidya" database using postgree / mssql
   (database name can be online_vidya or any other name also you can take)

   Created database online_vidya manually form pgAdmin by right clicking on Databases
   section.

   We can also use the following query to create the database online_vidya :

   ```
   CREATE DATABASE online_vidya
   ```

2. In the database create students table students table should have below columns :
   a) sno
   b) Name
   c) Phone
   d) email
   e) course

   The query used to create students table is as follows:

   ```
   CREATE TABLE students(sno INT PRIMARY KEY, Name VARCHAR(200)
   NOT NULL, Phone VARCHAR(20) NOT NULL, email VARCHAR(255),
   course VARCHAR(255) NOT NULL)
   ```

3. Query to display students data from students table:

   ```
   SELECT * FROM students
   ```

4. Query to add new record in students table:

   ```
   INSERT INTO students VALUES(1,'Yash
   Nimbalkar','1234556789','yash@gmail.com','Web Development')
   ```
